Gading Serpong, Kabupaten Tangerang, Banten

Hi, I'm Thomas a React.js Front-End Developer who enjoys crafting clean, functional, and responsive web interfaces. My core stack includes React, JavaScript, HTML, and CSS, and I'm currently active in building personal projects to strengthen my front-end skills and portfolio, especially in responsive UI development using modern tools and libraries. I also have prior exposure to data science and machine learning with Python through Dicoding's Data Science Bootcamp.

I have just completed my undergraduate studies, I successfully defended my thesis, completed the final revisions, and have been officially declared graduated. I'm currently a fresh graduate, ready to begin my professional journey. With a combination of technical and soft skills, along with a strong interest in technology and software development, I'm prepared to contribute and grow in the software development field. As a fresh graduate, I'm eager to grow, learn, and contribute in a professional software development environment.
